Design	Illustrator, Photoshop

+ ACADEMIC & PERSONAL PROJECTS

JAYU
(Academic Project)

Student productivity mobile application
React Native, PostgreSQL, axios, external NPM packages
https://github.com/jackytam2020/JAYU

Engaged in a collaborative and agile environment in the development of JAYU through weekly UI/UX testing, development scrums, and project scope management.

Created and combined components to create individual screens based on the designer's prototype.

Constructed functional components by utilizing UseEffect and UseState to load and change data based on component life cycle.

Connected and updated database to populate front end based on user interaction.

Nominations
(Academic Project)

Academy award winning movie finder application
HTML, CSS, JavaScript
https://github.com/jackytam2020/Nominations

Designed and prototyped UI layout for front end.

Styled with CSS to create the interface according to the prototype.

Design JSON schema for backend component of the application.

Created functions to allow for user input to change the user interface and functions that load the JSON objects into the front end.

Posts
(Academic Assignment)

Simple Posts Section.
PHP, MySQL
https://github.com/jackytam2020/MySQL_Practice

Developed a posting section with likes and comments and the ability to delete using PHP and MySQL

Created and optimized SQL queries

Executed AJAX functions based on GET and POST requests.

Weather
(Personal Project)

Weather application
HTML, CSS, JavaScript, Node.js
https://github.com/jackytam2020/WeatherApp

Developed a weather application that displays weather information of cities around the world using Google Places API and DarkSky API.

Implemented node.js server to make API calls.

Styled with CSS and used an external library to load weather animations based on the weather status.

Portfolio
(Personal Project)

Personal Portfolio
HTML, CSS, and Materialize CSS.
https://github.com/jackytam2020/Portfolio

Developed a fully responsive portfolio website using Materialize CSS library.

Imported different JavaScript based modules from the library to display screenshots and responsive capabilities

Calculator
(Personal Project)

Calculator application
HTML, CSS, and JavaScript
https://github.com/jackytam2020/Portfolio

Developed a simple calculator that calculates four basic operations. (multiplication, division, addition, and subtraction)

Styled with CSS utilizing grid to layout buttons

+ PROFESSIONAL EXPERIENCE

Sales Associate
Nov 2016 - Present
